

1. 85%
2. 36%
3. `customerGreeting()`
4.
 - a. `FrequentFlierMiles > 500000`
 - b. `FrequentFlierMiles <= 500000`
5. Some lines of code are always going to run no matter what such as the first line of the constructor
6. If `bookings` is null then you will get a `nullPointerException`
7. This bug still exists because all line of code are being tested but nothing is checking for null
